Halvarsson

Since 1946
**SCANDINAVIAN
PREMIUM**

ABOUT US

Motorcycling and motorcycle garments are our passion.

Halvarssons was established in **Malung**, a little town in the back country of **Sweden** where since the mid 1940's, the finest Scandinavian motorcycle garments have been made.

This tradition continues to live on in Halvarssons. Based on a firm foundation of craftsmanship, passion for detail and the highest level of protection, Halvarssons has always continued to develop its leather and textile motorcycle garments using only the finest quality materials and features to accommodate and protect you.

WE CARE

We're born with the well-known **Swedish conscience**, "to care" in our blood. It is therefore obvious to us to aim for the best and to always do what's right. **We care**, at Halvarssons. We care about each other and about our environment. We care about our friends who make the garments and about how they're made. We care about our dealers and most of all we care about **you**.

The **WE CARE** mentality in our company and in our work is present at every level. From design to production and all the way to you.

The exceptionally strong loyalty, from you, our riders, is the best proof that we do things right.

DESIGN PHILOS- OPHY

SAFETY THROUGH COMFORT has been our design philosophy throughout Halvarssons history. The more comfortable the garments are, the better you can focus on what matters.

We constantly develop our materials and technical features in order to be able to offer the best possible solutions for you, no matter the terrain or the conditions.

Among the testimonials to Halvarssons success are different police forces in Europe, all of whom proudly wear our gear.

Halvarssons makes great riding gear that lasts for years in terms of style, quality and safety. We want you to be comfortable and also safe. We want you to forget you're wearing our gear and just enjoy your ride.

WE ARE READY

Motorcyclist personal protection comes under the legislation of the EU Regulation 2016/425. This means that all products that are intended to protect the user from one or another hazard must be tested, by an accredited laboratory, to a written CE standard or Regulation. The laboratory issues a CE certificate for each product if it passes the criteria.

Different tests are performed for different products such as gloves, boots, limb protectors, back protectors, etc. Generally, mechanical tests and innocuousness tests are performed according to each CE standard. If the product only provides protection against the seasons, such as rain and wind, it does not need to be tested and certified.

Both the importer and the distributor are responsible for ensuring that the products brought into and placed on the market in the EU are tested and certified.

The people behind the Halvarssons brand are very experienced in developing products in this field and have been at the forefront of developing and testing protective gear for motorcyclists.

TODAY THERE ARE STANDARDS FOR THE FOLLOWING PRODUCT GROUPS:

- EN 1621-1 CE standard for impact protection (shoulders, elbows, hips and knees).
- EN 1621-2 CE standard for back protection.
- EN 1621-3 CE standard for chest protection.
- EN 1621-4 CE standard for inflatable protection.
- EN 13595 CE standard for motorcycle gloves.
- EN 13634 CE standard for motorcycle footwear.
- EN 14021 CE standard to protect riders against stones and debris (off-road motorcycling).
- EN 17092 CE standard for protective clothing for private individuals.

In some standards, the level of protection is stated. **Level 1** indicates the lowest level of protection, and **Level 2** the highest level of protection.

Read more at www.halvarssonsmc.com

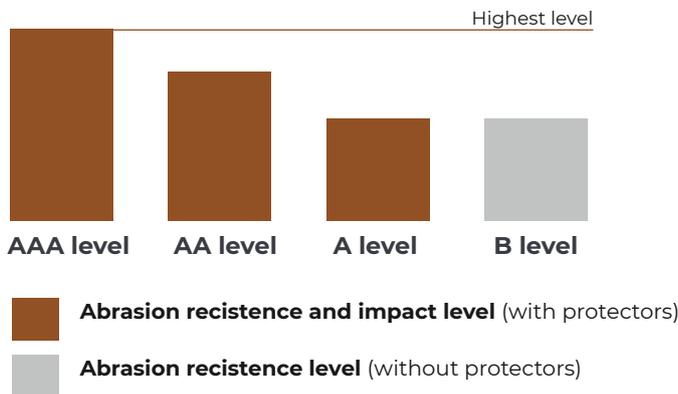

TECHNOLOGY CE CERTIFIED PRODUCTS

There are days when things don't go to plan. Only during these times, you start to appreciate the reliability of your motorcycle gear. The EU has finally approved a new standard, EN 17092, *Protective clothes for motorcyclists*.

Abrasion and impact certification levels

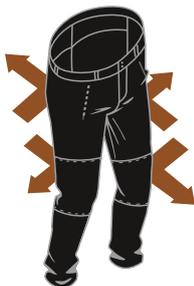

Abrasion tests are performed on the construction at three different **zones** (all layers together) of the garment, excluding the detachable linings. The demands vary in these different parts of the body. Shoulders, elbows, hips, and knees have higher demands than for instant inner thighs or underarms.

AAA is the highest performance level and then **AA** and **A**. The criteria for **B** are the same as for **A** but without impact protectors. To meet a certain performance level for a product, the results of all mechanical tests must reach the criteria of this level.

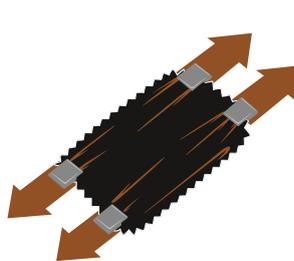

IMPACT ABSORPTION TEST

ABRASION RESISTANCE TEST

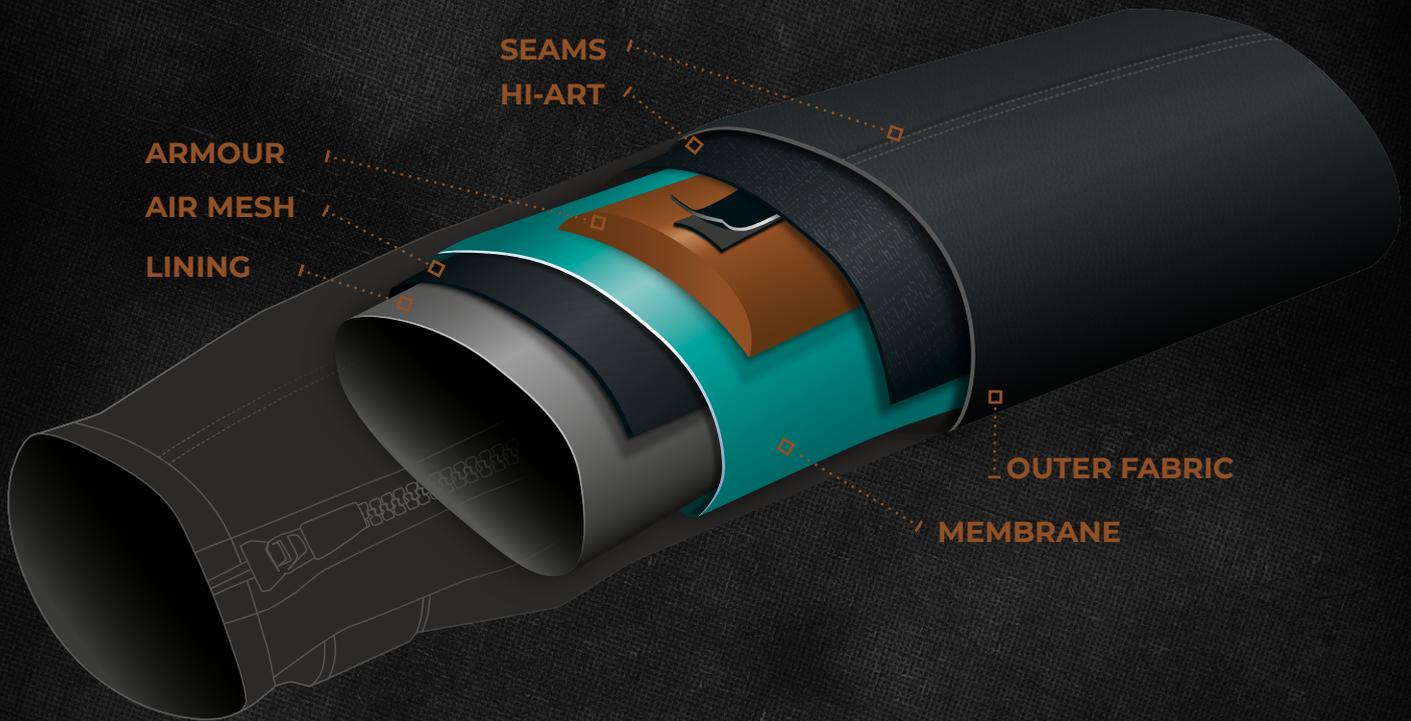

TEAR STRENGTH TEST

STRENGTH OF SEAMS TEST

BENEATH THE SURFACE

SEAMS

We choose thread to suit the material to make seams as strong as possible. We use Triple Stitch in vulnerable areas of our leather wear.

OUTER FABRIC

The outer fabric is leather or textile with various types of surface treatment.

HI-ART

This is where HI-ART® is located in our garments. Our proprietary material makes garments resistant to abrasion, and is used in most of our products.

ARMOUR

Garments that use armour have Velcro sewn into them to keep the armour in place and for ease of adjustment.

MEMBRANE

Some garments also have a sewn-in or removable membrane. Taped seams, naturally.

AIR MESH

We often use Air Mesh behind armour for better comfort.

LINING

Closest to the body is a lining, sewn-in or removable. Usually made from ventilated mesh, temperature-regulating Outlast® or a warm, quilted lining.

ACCESSORIES 46

PREMIUM ALL SEASON

These garments are all water and windproof with great breathability thanks to our DRYWAY+ and DRYWAY+2.0 membranes. This includes both laminated and drop-liner products. The Premium All-Season category also benefits from temperature-regulating OUTLAST material and from the excellent heat restoration ability of the INNOBORN insulation. Our own development, the HI-ART material, helps to ensure very high-level abrasion resistance in all garments in this category.

All our products are made of certified materials and are officially CE approved (prEN 17092) having AAA or AA level of protection.

CLASSIC LEATHER

Our high-quality leather garments are all made from hides that are biproducts of the meat industry. We carefully hand select only the best hides from goat and cow to ensure our quality standards. The leather garments are all treated for design and quality reason. HI-ART helps to ensure a very high-level abrasion resistance in all garments.

All products are officially CE approved (prEN 17092) having AA level of protection.

BRANDED MATERIAL EXPLANATION

We are blighted by an almost obsessive desire to produce gear that is, as comfortable to wear as it is safe to ride in. It's why we spend so much time researching fabrics, new technologies and different construction methods. It's a never ending pursuit. There's always a way to improve a garment. And there's always a new development that will help to improve biker's lives.

HiArt for example is a material that we ourselves developed as an abrasion resistant backing material used in almost every product we produce. It can increase the strength of textile by up to 500% and leather by 200%. Of course not all the technologies we use are designed in house so we make use of highly regarded materials and membranes like Dryway and Dryway+ to keep you dry and comfortable, Outlast linings to regulate temperature, Thinsulate to keep you warm and TFL to reflect heat when it's hot. Each of these technologies is rigorously tested and selected to suit our exact needs for the product we design. Outer

materials are chosen for their strength and durability. The thread used in stitching is selected for strength while the size of the stitch is carefully calculated to offer maximum strength.

But the very best materials form only part of the equation. Just as important as the technology is the comfort and fit of the garment for quite simply, a rider who is relaxed and comfortable on the bike is a rider who can focus all his attention and energies to staying alert and safe. This is why the materials we use are not just effective in keeping you safe but also soft and supple, chosen for their lightness and ease of use. It doesn't stop there. All of our fitted protectors are adjustable for a perfect individual fit with adjustable hems, cuffs and waist areas to further emphasise this.

Put on one of our products and you will see what we mean. All of which increases the chances of you arriving home safe and relaxed.

CARE INSTRUCTIONS

LEATHER GARMENTS

Leather garments must never dry out completely. Because dry leather fibres break easily under stress such as an accident, treat leather regularly with e.g. Nikwax Waterproof Wax for Leather so that it retains its natural elasticity. Use a mild soap solution or leather soap such as Nikwax Leather Cleaner two or three times a year to ensure garments last year in, year out. Always test it first somewhere that doesn't show e.g. inside.

TEXTILE GARMENTS

To keep textile garments clean, wash them according to their washing instructions; we recommend the use of Nikwax Tech Wash. But don't forget to remove the armour. You should waterproof outer garments often, preferably every three washes. Use Nikwax TX Direct for functional clothing.

COMING IN FROM THE RAIN

Let wet garments dry slowly at room temperature. Leather garments should not be dried at too high a temperature and never in an airing cupboard or on a radiator as this will make garments stiff and hard.

CLOTHES MADE FROM THE RIGHT STUFF

HI-ART® HI-ART®

HI-ART is a proprietary material developed by us. We use the material in especially exposed areas to increase abrasion resistance. It makes leather 200 per cent stronger and textiles no less than 500 per cent stronger. We are extremely proud of our invention and of being alone in offering you this solution.

TRIPLE STITCH 3 3STICH

A garment is never stronger than its seams. It makes no difference how good the material is if the seams break. Following a multitude of tests, we have found a technique that provides maximum durability. We use a well-balanced stitch density, a heavy-duty, hard-wearing thread in triple stitched seams in exposed areas.

Outlast® OUTLAST®

Outlast® is a high-tech material that regulated the temperature inside the garment. It was originally developed to protect astronauts against extreme temperature changes and has since then been further developed to work in motorcycle wear as well. The lining consists of millions of microscopic paraffin wax capsules that absorb, store and release excess heat to keep you feeling comfortable out on the road. Read more at outlast.com

mcFIT® mcFIT

Maximum Comfort FIT technology in gloves laminates the liner and membrane with the outer shell for a perfect fit and prevents the liner from following your hand when removed.

SKIN FIT SKIN FIT

A technology used to secure glove linings. Where used the lining will remain firmly attached and not follow your hand when removed.

Teflon® TEFLON®

A Teflon treatment on a garment will keep water and dirt away. It also allows the garment to dry quicker. Read more at teflon.com

DRYWAY+2.0® DRYWAY+ PLUS® DRYWAY®

Dryway+2.0®, Dryway+® and Dryway®

Dryway+2.0, Dryway+ and Dryway are wind and waterproof membranes that keeps you dry even in the wettest, windiest weather. The material allows moisture vapor to escape from the inside while keeping wind and rain out. Our latest functional membrane, Dryway+2.0, has a waterproofing value of 10,000mm and a 30,000g/m²/24h breathability value. Keep in mind that a membranes function relies upon the difference in humidity between the inside and outside. If an external heat source is applied such as heated grips or seats, the membrane will work in reverse.

DWR

An extra water repellent treatment on some of our textile and leather products providing additional comfort to the user. Garments treated with a DWR will shed water more efficiently, retain their breathability properties and dry faster while also being easier to keep clean.

TFL COOL SYSTEM

TFL Cool System®

Black leather can easily become hot in the sun. Therefore we use TFL Cool System – an innovation that ensures black leather to not absorb more heat than lighter coloured materials. Once it has been treated, 80 per cent of the heat radiation is reflected away and the garment can be up to 20 °C cooler.

When we create new products, we set ourselves high standards. Our secret recipe for success is a century of craftsmanship blended with high technology. The result is motorcycle gear that's far ahead of the pack. Just ask any of the professional motorcyclists who wear our garments daily, for instance, we have great response from some of the police forces around Europe. In this section you can read all about the techniques and methods we use to keep you safe and comfortable on the road.

INNOBORNE® The Optimal Insulation 100% OLEFIN INNOBORNE®

An insulating material capable of retaining heat longer than even wool yet is light weight, quick drying and transports moisture efficiently away from the body. Consist of 100% Olefin / Polypropylene.

Thinsulate INSULATION THINSULATE®

Sometimes warm clothes can feel awkward and bulky, but thanks to Thinsulate our garments are light and supple, while also keeping you warm. The secret behind the material is in the unique microfibrils that helps trap body heat, while allowing moisture to escape. Read more at thinsulate.com

The CE label shows that the product complies with an approved safety standard based on advanced testing and accident studies.

If a jacket bears this symbol it has a pocket ready for our CE-approved HUNTLY back protector.

This product is pre-fitted with Velcro and can be complemented with a complete protection kit for pants. The CE-approved protectors come in two sizes.

The product has CE-approved protection level 1 and Velcro fasteners for easy adjustment. Jackets have shoulder and elbow armour. Pants have hip and knee armour.

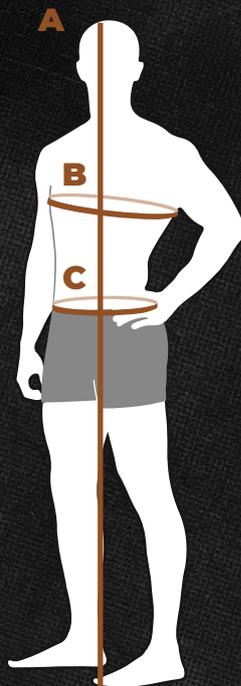

This product has armour that achieves Level 2, the highest level according to EN 1621-1:2012. Velcro attachments for personal fit. Jackets have shoulder and elbow armour. Pants have hip and knee armour. Elbow and knee armour are designed to provide more protection on the outside of the knee/elbow.

SIZE AND FIT

Looking good and feeling comfortable on the road demands the right size clothes. What many forget is that a good fit is also important for safety. Because it's essential for protectors to be positioned correctly, we make adjustments possible by attaching protection with Velcro. Also, remember to try on the garments together with the clothes you usually wear when riding your MC. And don't be afraid to ask our personnel for help. The best way to find the right size is to visit one of our dealers. They'll help you find the right fit when you need new equipment.
